Today's Agenda

Build univariate and bivariate visualizations for your research project report.

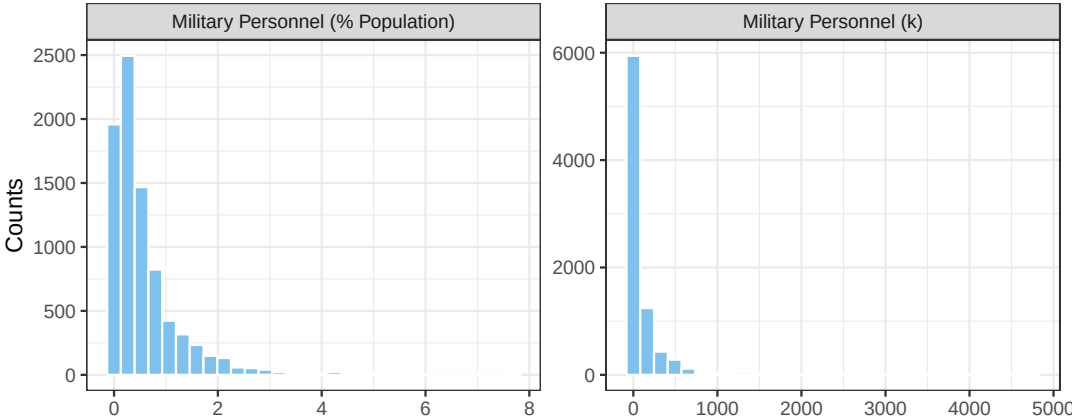
Justin Leinaweaver (Fall 2021)

Visualizations

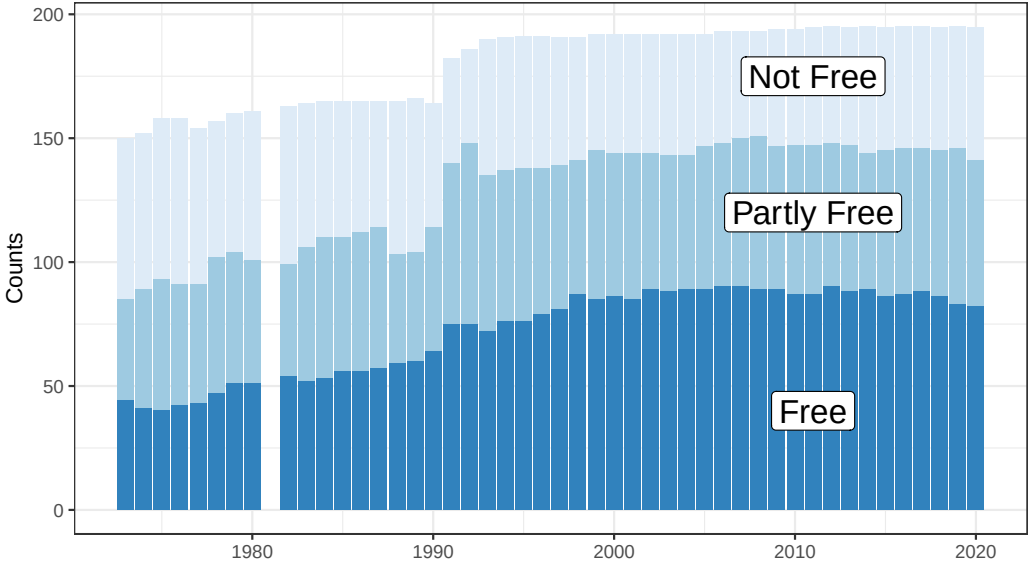
1. Histogram: The new predictor variable (milper_prop)
2. Stacked bars: FH status by year
3. Line: Mean FH total across time (+/- 1 Std Dev)
4. Boxes: milper_prop x FH status
5. Scatter (with correlation): milper_prop x FH total
6. Scatter (with correlation): milper_prop x pr
7. Scatter (with correlation): milper_prop x cl

Most countries enlist well below 1% of their populations in the military

(Almost all below 2%)

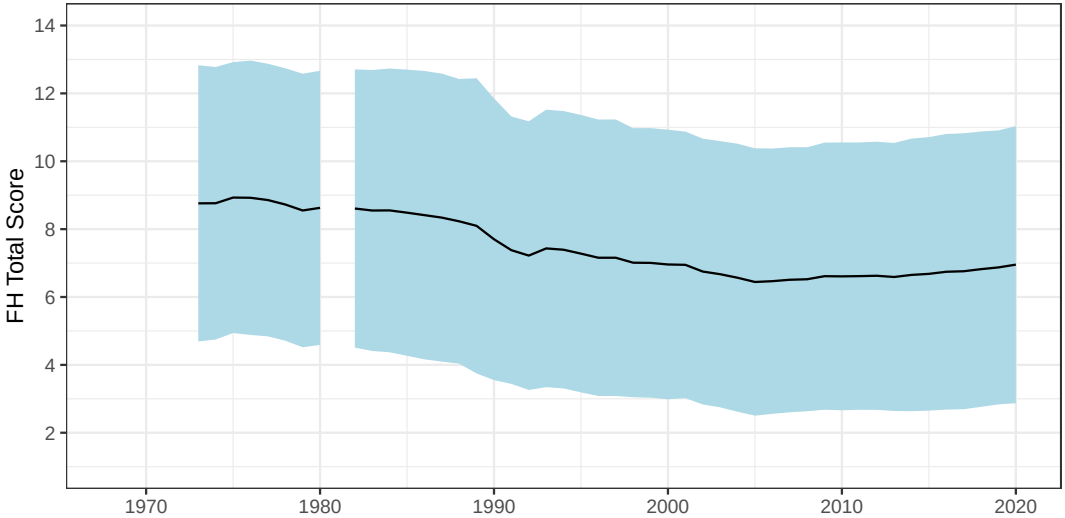


Freedom was on the march around the world (until 9/11)!



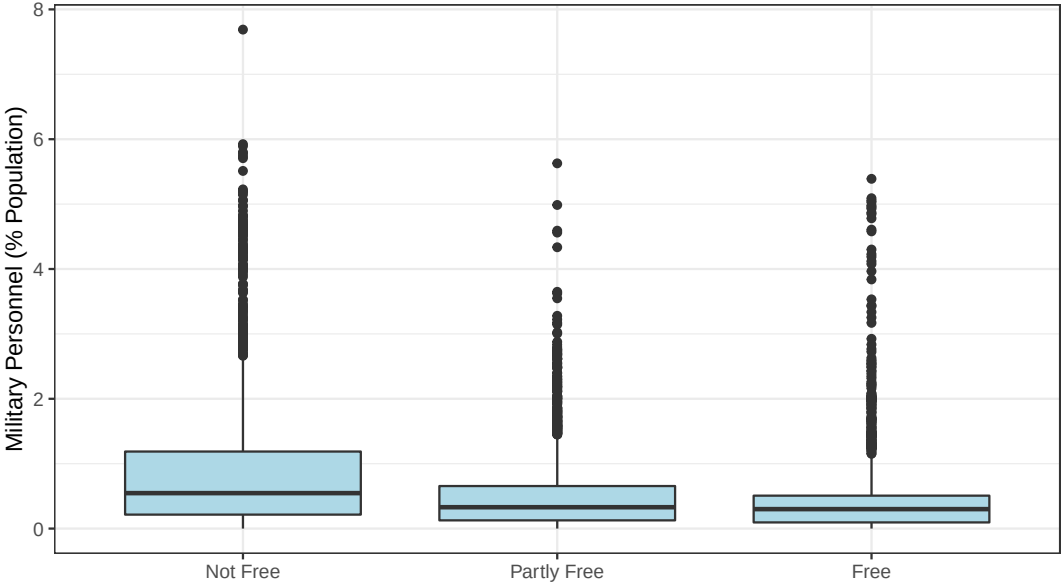
The average FH score has been falling since the 1970s

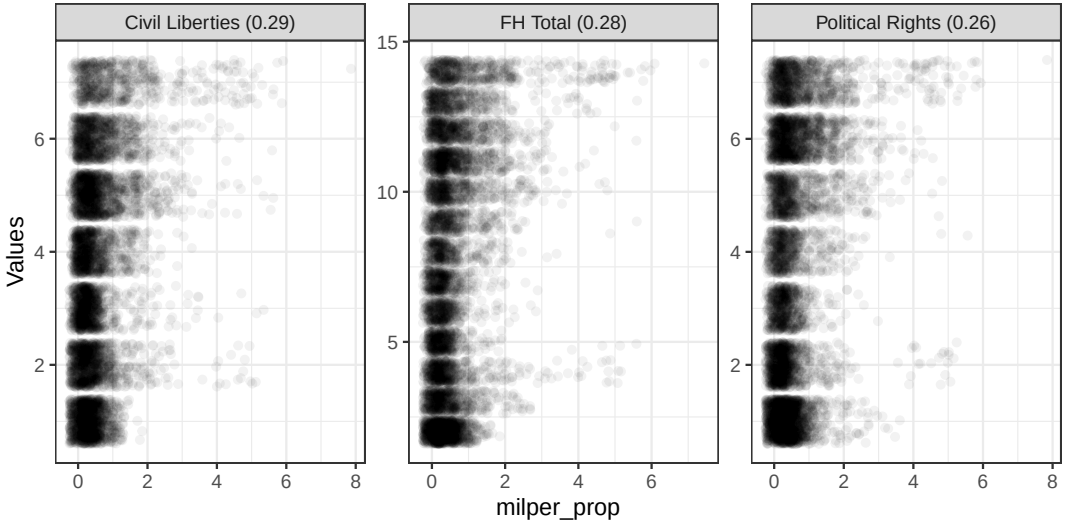
(Although things may have stabilized since 2005)



Line and ribbon represents the mean +/− 1 Std Dev

Freedom appears to correlate with smaller enlistments





Civil Liberties (0.29)
FH Total (0.28)
Political Rights (0.26)

For Tuesday

1. Wheelan chapter 11 “Regression”
2. *Linear Regression in R* on Moodle, “Simple OLS” section only
